Industrial Sanitation (Dry Method)

Our Core Business With Winning Track Record

- Dry sanitation removes food residues without using large amounts of water. Workers use HEPA vacuums, brushes, scrapers, and damp cloths to remove flour, crumbs, dust, and other dry contaminants from equipment and surfaces.
- Helps prevent microbial growth and cross-contamination. By keeping production areas dry, facilities reduce the risk of bacteria, mold, and yeast developing on equipment and food-contact surfaces.
- Widely used in bakeries and dry food manufacturing plants. It improves food safety, minimizes production downtime, and supports compliance with HACCP, GMP, and other Philippine food safety standards.

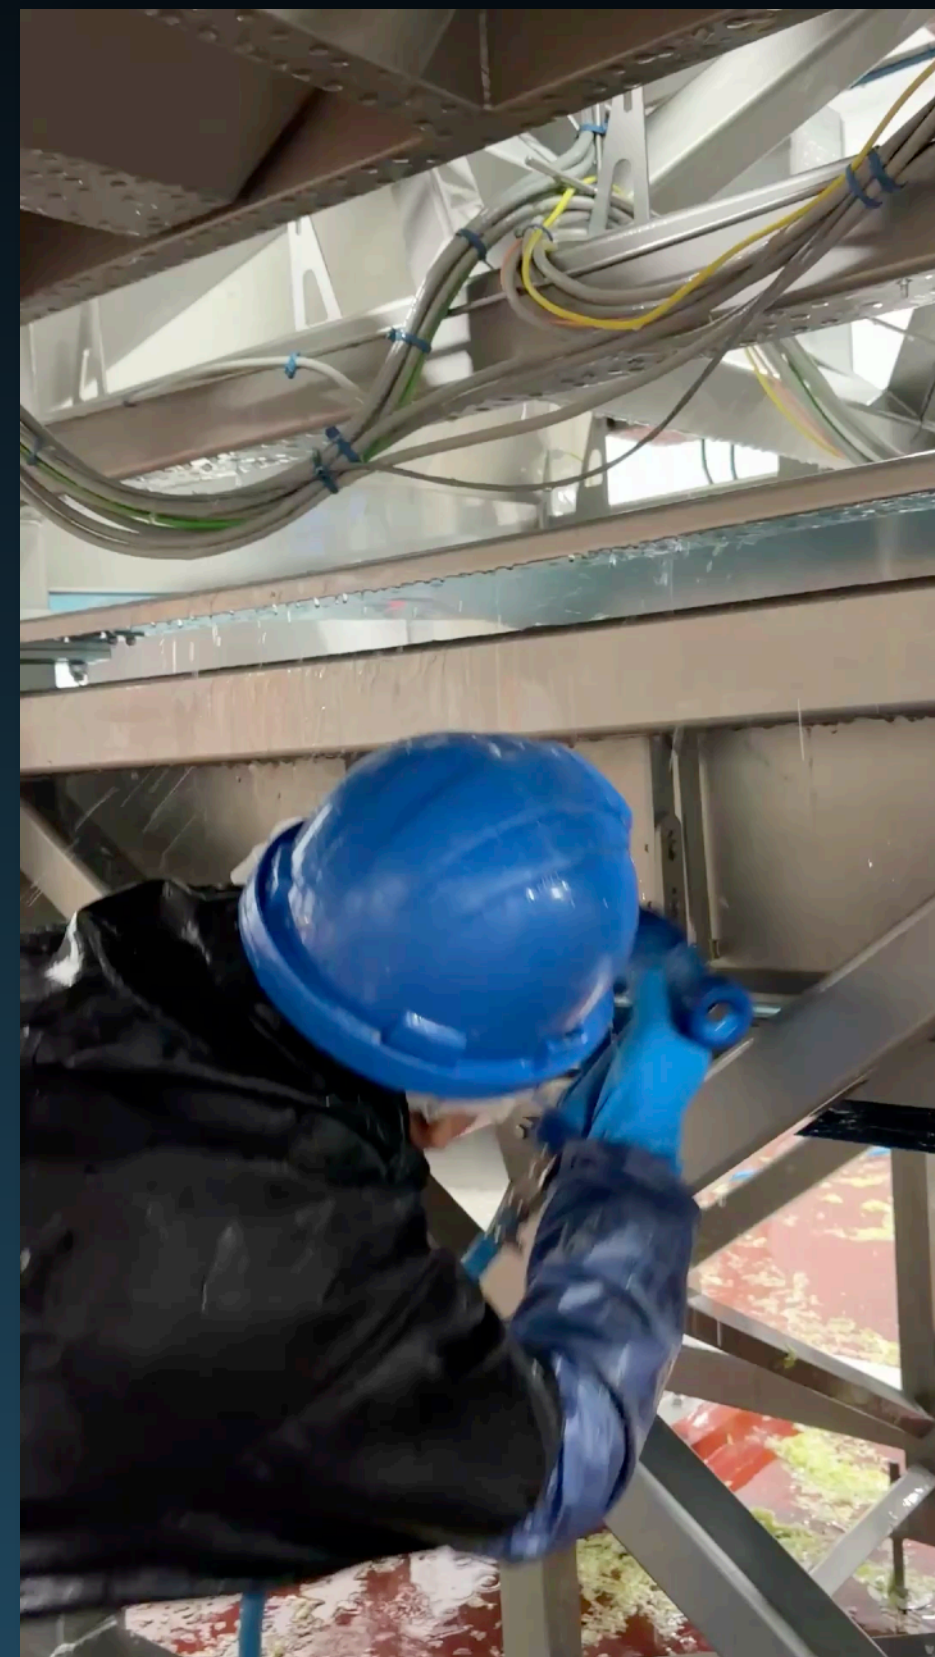

7 Steps Of Cleaning

We Go Above And Beyond The Audit Expectations.

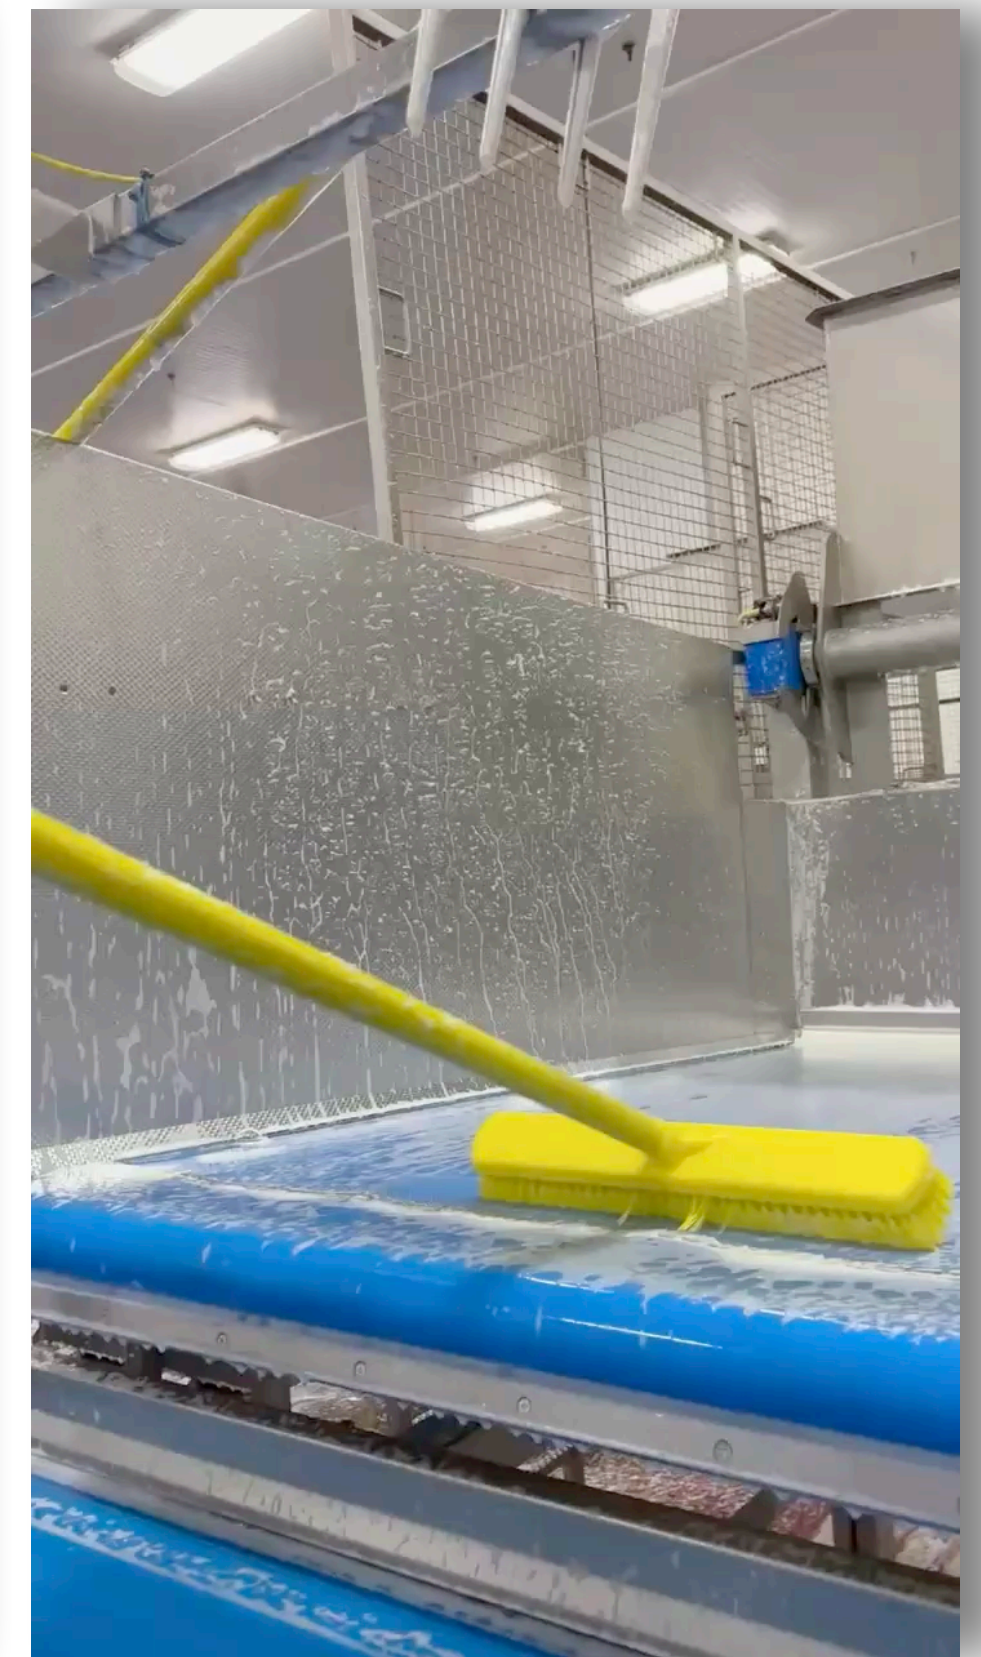

STEP 1: Dry Pick up

STEP 2: Pre-Rinse

STEP 3: Foam & Scrub

7 Steps Of Cleaning

We Go Above And Beyond The Audit Expectations.

STEP 4: Post Rinse & Self Inspection
